# Steel Shake Roofing

A roof for a lifetime, not a lifetime of roofing™

## UNITED STATES SEAMLESS® STEEL SHAKE ROOFING

From grass and shrubs to lighting and colors—your home reflects your hard work, creativity, and style. Making sure flowers are bright and the yard immaculate is part of the pride of home ownership.

But an unsightly roof draws attention from your hard work. Missing or curling shingles, lost granules, and streaking black algae not only detract from the look of your home, but can be signs of a failing roof. A leaky roof ruins insulation, ceilings, walls, and possessions. It can also leave your family vulnerable to illness from black mold. Replacing temporary roofing materials such as asphalt, composition, or wood shingles is a costly and frustrating process that is typically repeated every ten to fifteen years.

*"We'll go to any length to beautify your home!"®*

“The roof looks great! We're really enjoying it and we show it off just like a new car. We are so pleased with our decision to buy metal.”

## BEAUTY AND TECHNOLOGY

United States Seamless's deep grooves give the appearance of hand-split wood shake in a wide array of vibrant color options that will enhance the splendor of any home. Using Kynar 500® coatings, United States Seamless forms a tight molecular bond to seal in color while keeping sun and weather out. United States Seamless will look beautiful for decades.

United States Seamless shakes come in traditional colors as well as variegated colors featuring the advanced thermobond technology. These textured panels are made from two layers of Kynar 500® that are heat sealed together for added strength and efficiency. The result is a distinct and unique palette of colors unmatched in the industry.

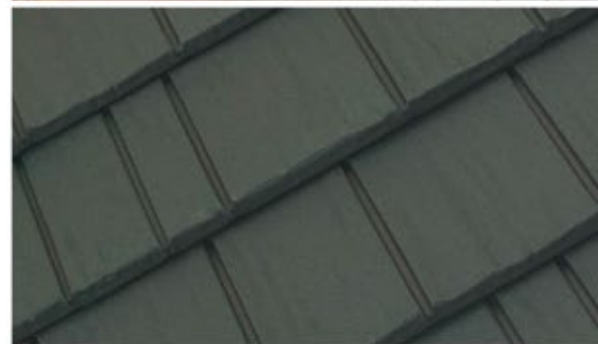

## STRENGTH AND BEAUTY FOR A LIFETIME

There is a worry-free solution that will protect and add beauty to your home for a lifetime. A United States Seamless steel roof protects and preserves your home so you can spend more time on the things you enjoy.

**Made from specially coated G90 Galvanized Steel, United States Seamless Roofs are:**

- **Impact Resistant**—United States Seamless will not crack or penetrate against the most severe hail.
- **Fire Resistant**—United States Seamless will not burn and will protect your home from wind blown burning embers.
- **Wind Resistant**—United States Seamless' four way, concealed interlocking system keeps your roof covered in winds of up to 120 mph.

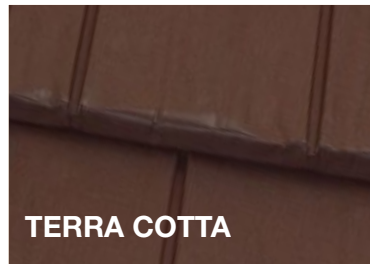

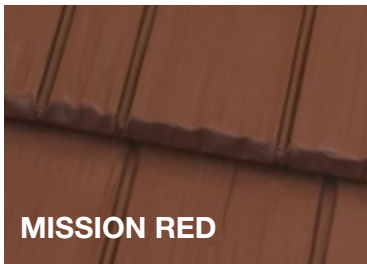

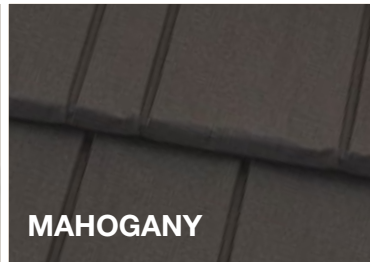

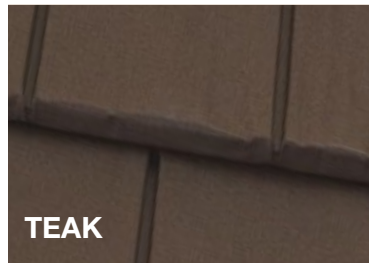

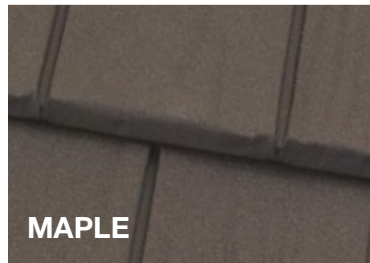

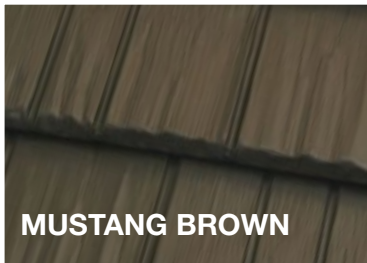

## UNITED STATES SEAMLESS® ROOFS SAVE

Other roofing materials absorb the sun's intense energy into the living area causing higher interior temperatures, overworked air conditioners, and soaring energy bills.

United States Seamless will reduce energy use, thereby putting more money into your pocketbook. Its coatings and unique design reflect away the sun's energy and create an air space between the shingles and roof decking. As a result, United States Seamless homeowners enjoy a cooler home and energy savings of up to 20% in the summer.

United States Seamless roofing is also made from 30% recycled steel and is 100% recyclable, reducing the carbon footprint of your home and conserving precious natural resources.

### SOLID COLORS ————— POWDER COAT COLORS

## WARRANTED FOR A LIFETIME

No one protects homes like United States Seamless® steel shakes. That's why we confidently back every roof we produce with the industry's strongest lifetime limited warranty. Our non-prorated warranty covers the cost of materials and labor. If you sell your home, we give subsequent homeowners the same protection for up to 40 years from when the roof was installed. No other roofing manufacturer provides this level of comprehensive coverage.

United States Seamless®

# Steel Shingle Roofing

Protect your home with beauty and style while keeping America's economy working strong!

## UNITED STATES SEAMLESS® STEEL SHINGLE ROOFING

A home's roof can detract from the hard work poured into making a house a haven. Asphalt, composition, and wood shingles begin to wear and fail as soon as they are installed. Black streaks, missing granules, moss, and curling corners take away from the home's beauty and are signs of a weakening roof.

United States Seamless Steel Shingle's unique paint system, colors, and design will preserve, protect, and add to the beauty of any home for a lifetime.

## ALL-AROUND EFFICIENCY

Temporary roofing materials act like a sponge and soak up the intense summer sun into the attic and living space of your home. That heat breaks down the roof, overworks air conditioners, and drives up energy bills.

United States Seamless Shingle's Kynar 500® paint system reflects that intense energy, keeping living spaces cooler, air conditioners more efficient, and utility bills low. Homeowners save money and energy with United States Seamless.

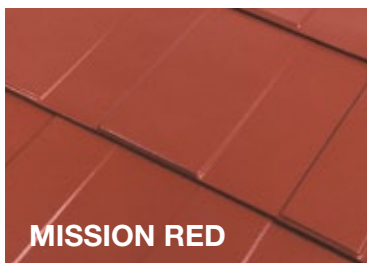

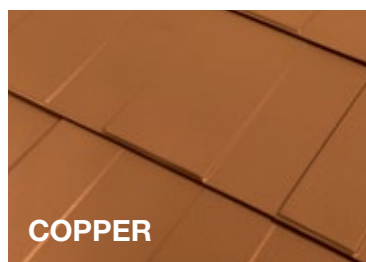

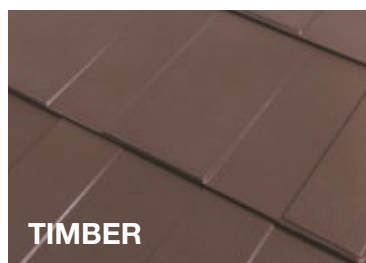

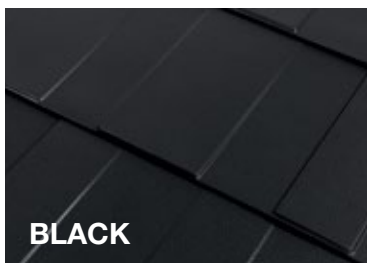

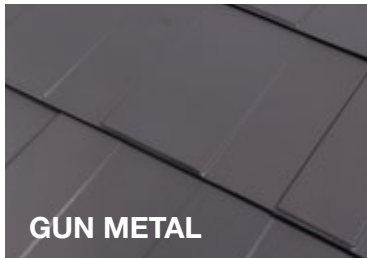

[www.usseamless.com](http://www.usseamless.com)

## A LOW WEIGHT SOLUTION

Temporary roofing can add significant weight to the internal structure of your home, causing it to sag and shift over time. United States Seamless Steel Shingles weigh far less than the lightest asphalt shingles, yet add the strength of steel for a lifetime of beauty and protection.

## A SUPERIOR WARRANTY

Unlike most temporary roofing pro rated warranties, the United States Seamless Steel Shingle Lifetime Limited non-prorated warranty is transferable to subsequent homeowners for up to 40 years from installation and includes a 30-year fade and chalk warranty, giving you peace of mind for the future.

## 100% MADE IN AMERICA

Every component of a United States Seamless Steel Shingle roof — top quality steel, coatings, and accessories — is manufactured in the United States. United States Seamless Steel Shingles protect your home with beauty and style while keeping America's economy working strong!

## SURPASSING THE STANDARDS

*United States Seamless has passed the following tests for strength and protection.*

- **UL 1897 Wind Uplift**—United States Seamless' unique fastener system can withstand winds of up to 120 miles per hour.
- **UL 489 Wind Driven Rain**—In the most intense rain storms of up to 110 miles per hour, United States Seamless' fastener and interlocking system keeps rain away from the vulnerable decking keeping the home dry and free from leaks.
- **UL 790 Fire Resistance**—United States Seamless Steel Shingles protects homes from wind blown embers that cause most home fires in fire prone areas of the country.

**UNITED STATES SEAMLESS**  
*"We'll go to any length to beautify your home!"*

United States Seamless® combines Kynar 500® and our own ThermoBond® technology to produce the industry's leading and only variegated powder coat shingle. United States Seamless® offers a unique premium option for homeowners who demand the best.
